BUSINESS PROBLEM

Our company aims to diversify its portfolio by entering the aviation industry, focusing on purchasing and operating airplanes for commercial and private use. However, we face the challenge of lacking knowledge about the risks associated with different aircraft models. Our task is to identify which aircraft present the lowest risk by analyzing aviation accident data. We will utilize a dataset from the National Transportation Safety Board (NTSB) that spans from 1962 to 2023, including civil aviation accidents and incidents in the United States and international waters. The goal is to provide actionable insights for informed aircraft purchase decisions.

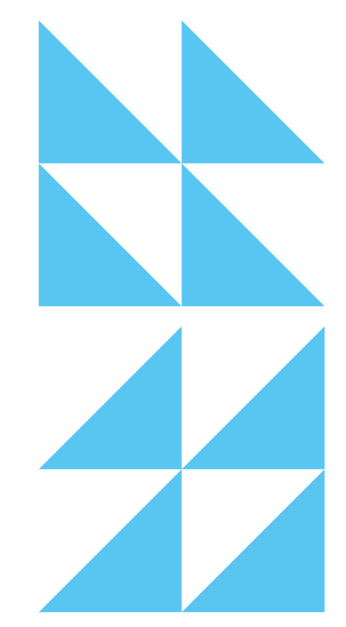

OBJECTIVES

- Access risk associated with different aircraft models.
- Generate insights for informed decision-making.
- Support the company's strategic goals in the aviation sector.
- Communicate findings effectively to stakeholders.

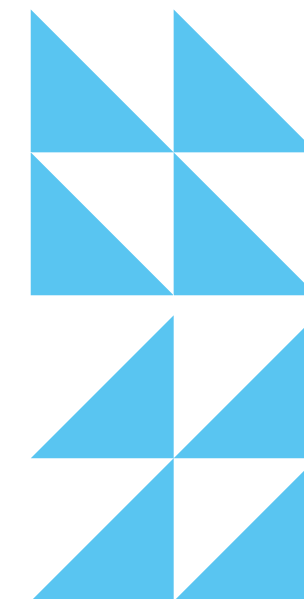

KEY RESULTS

- Identification of aircraft models with the lowest accident rates.
- Analysis of factors contributing to accidents, such as human error and mechanical issues.
- Recommendations for aircraft manufacturers based on safety records.
- Insights into trends over time in aviation safety data.

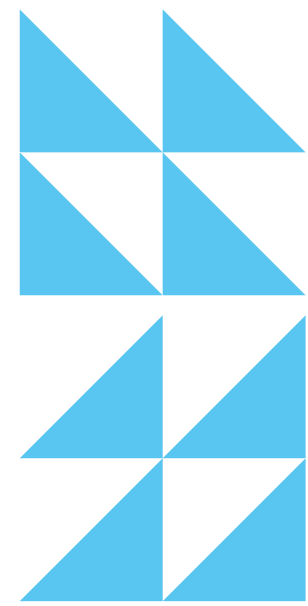

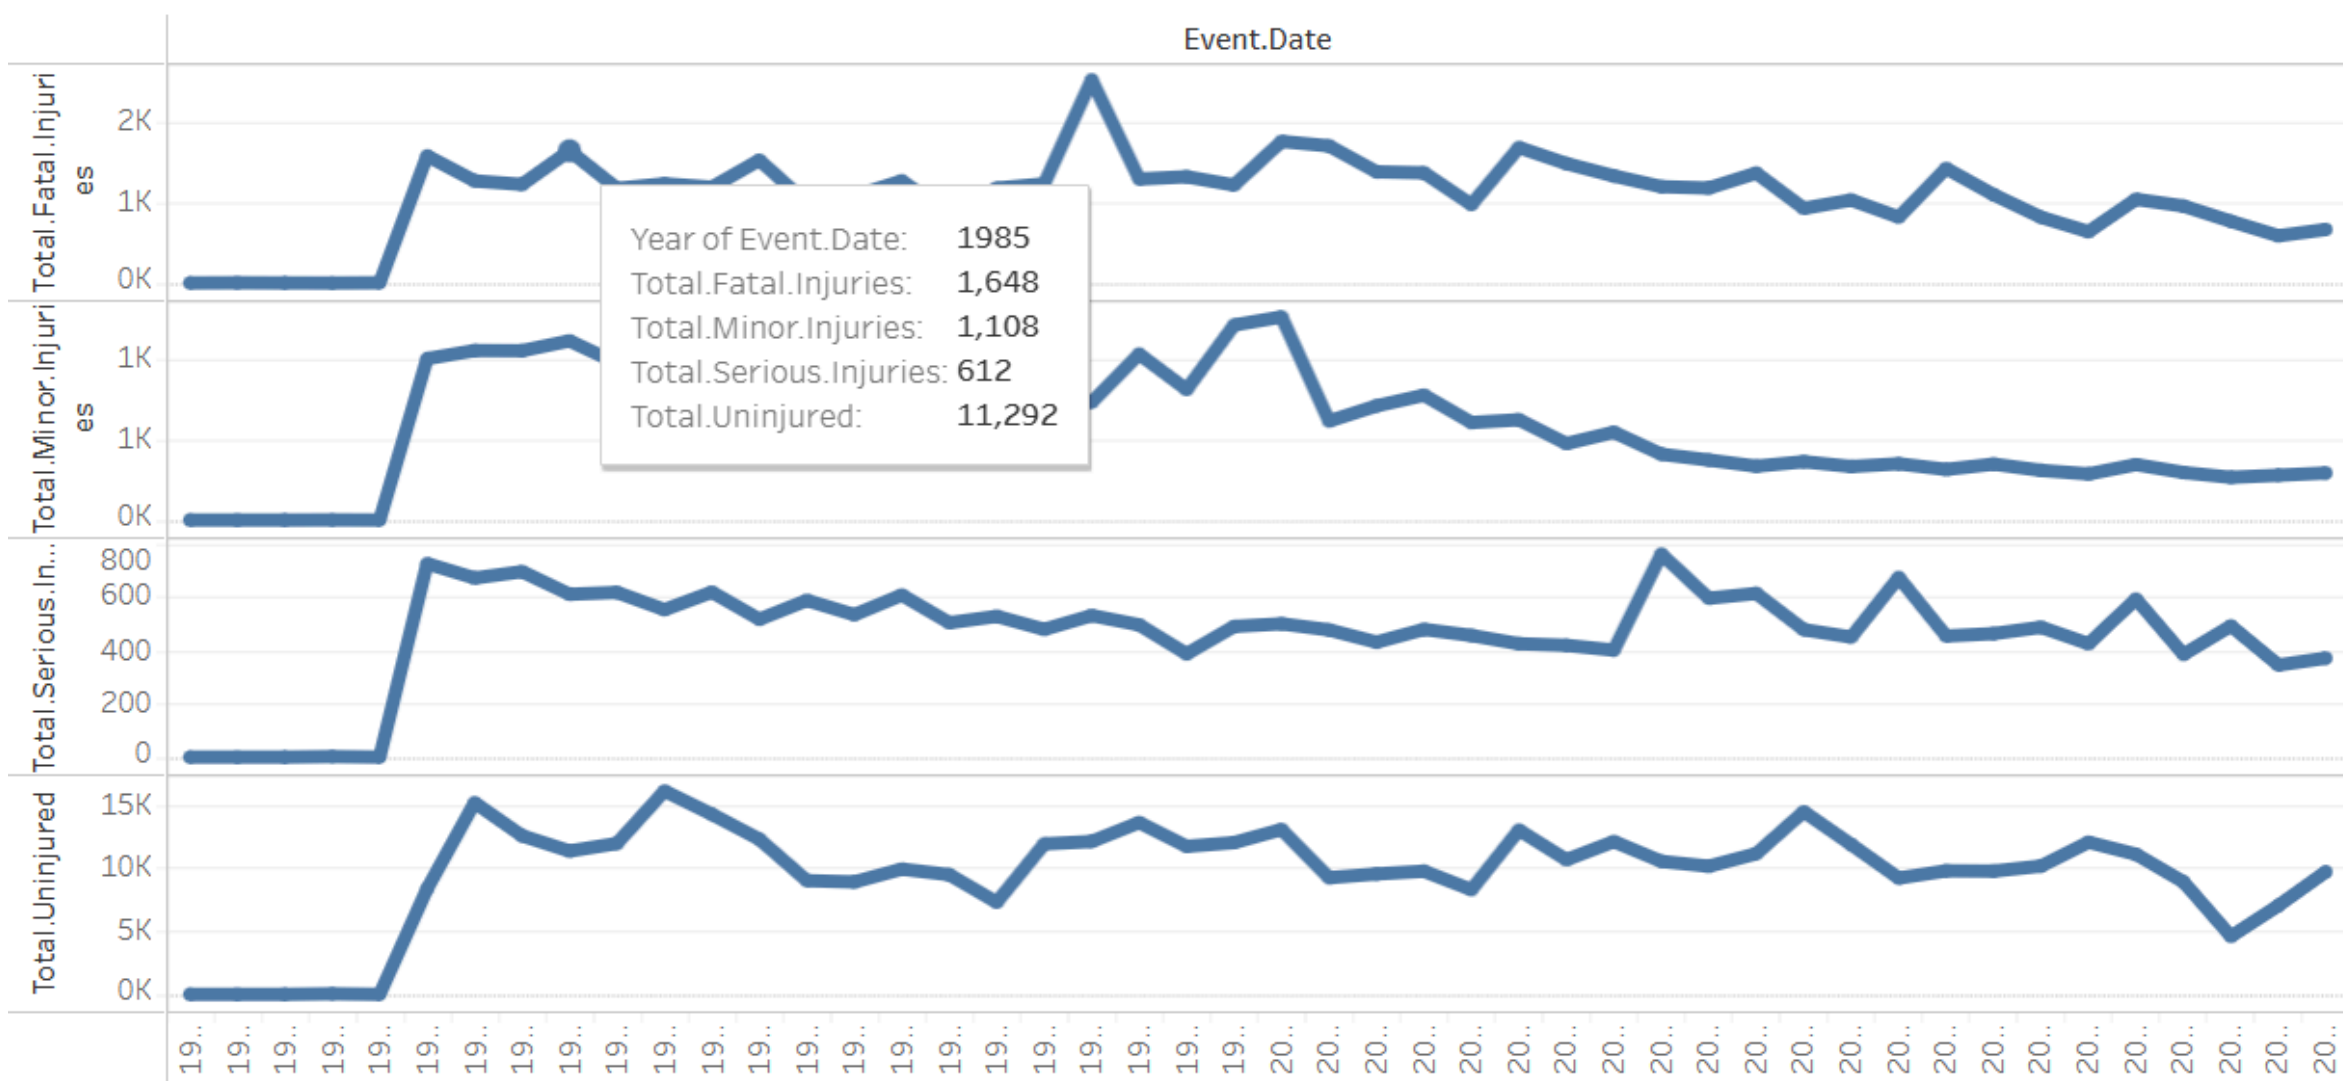

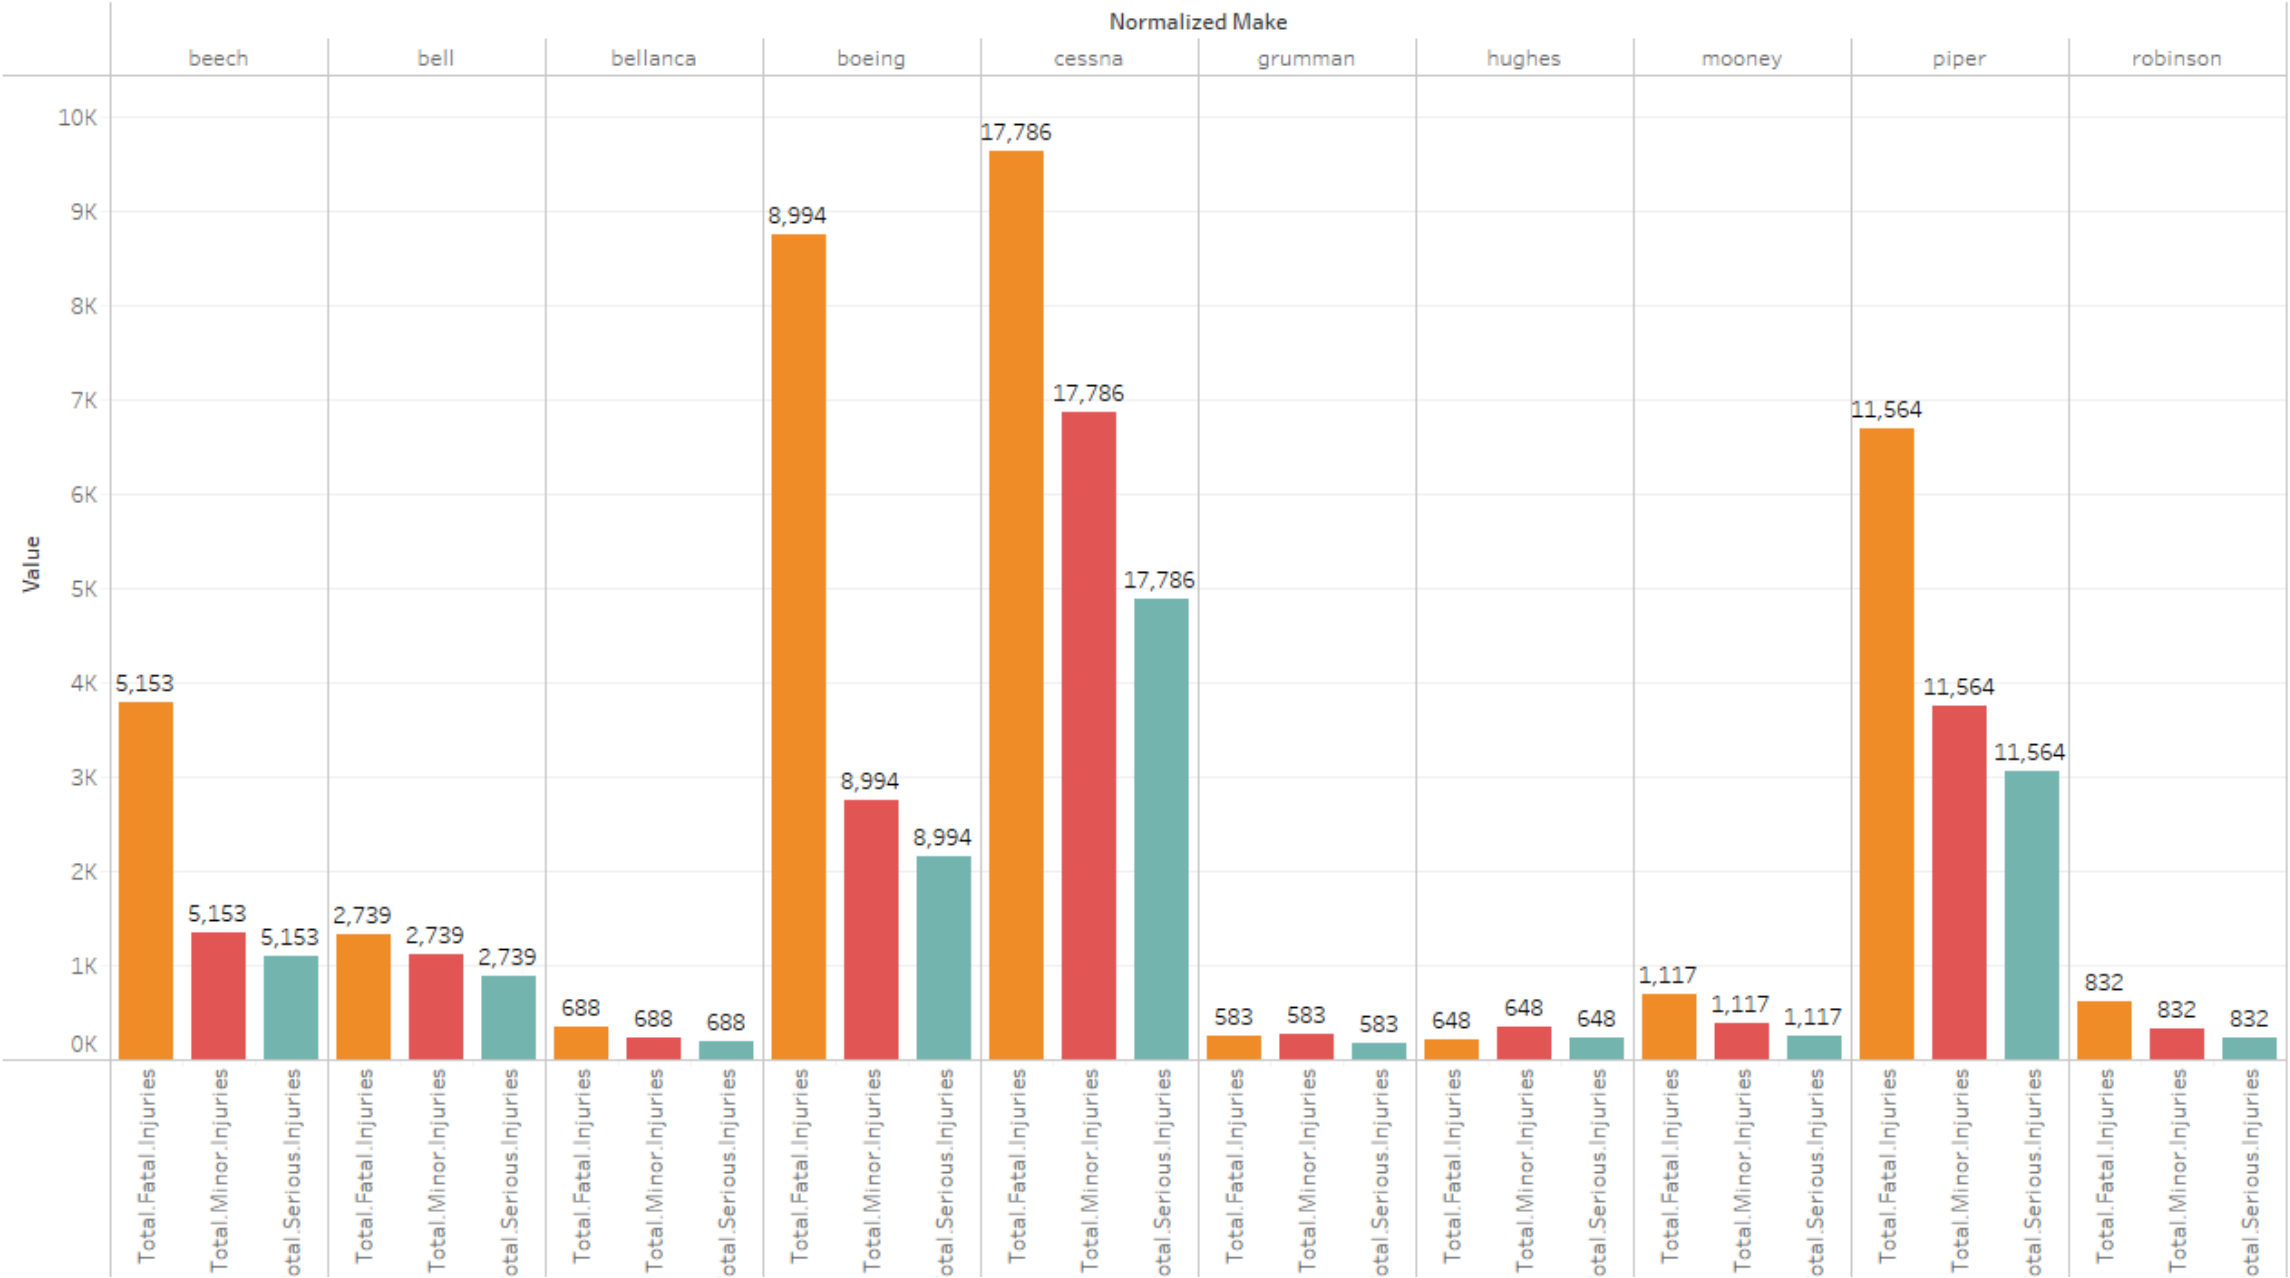

DATA INSIGHTS SLIDES

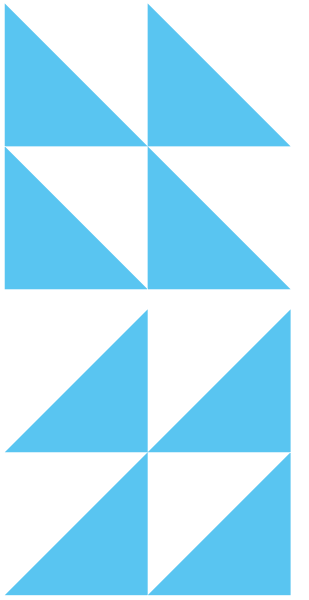

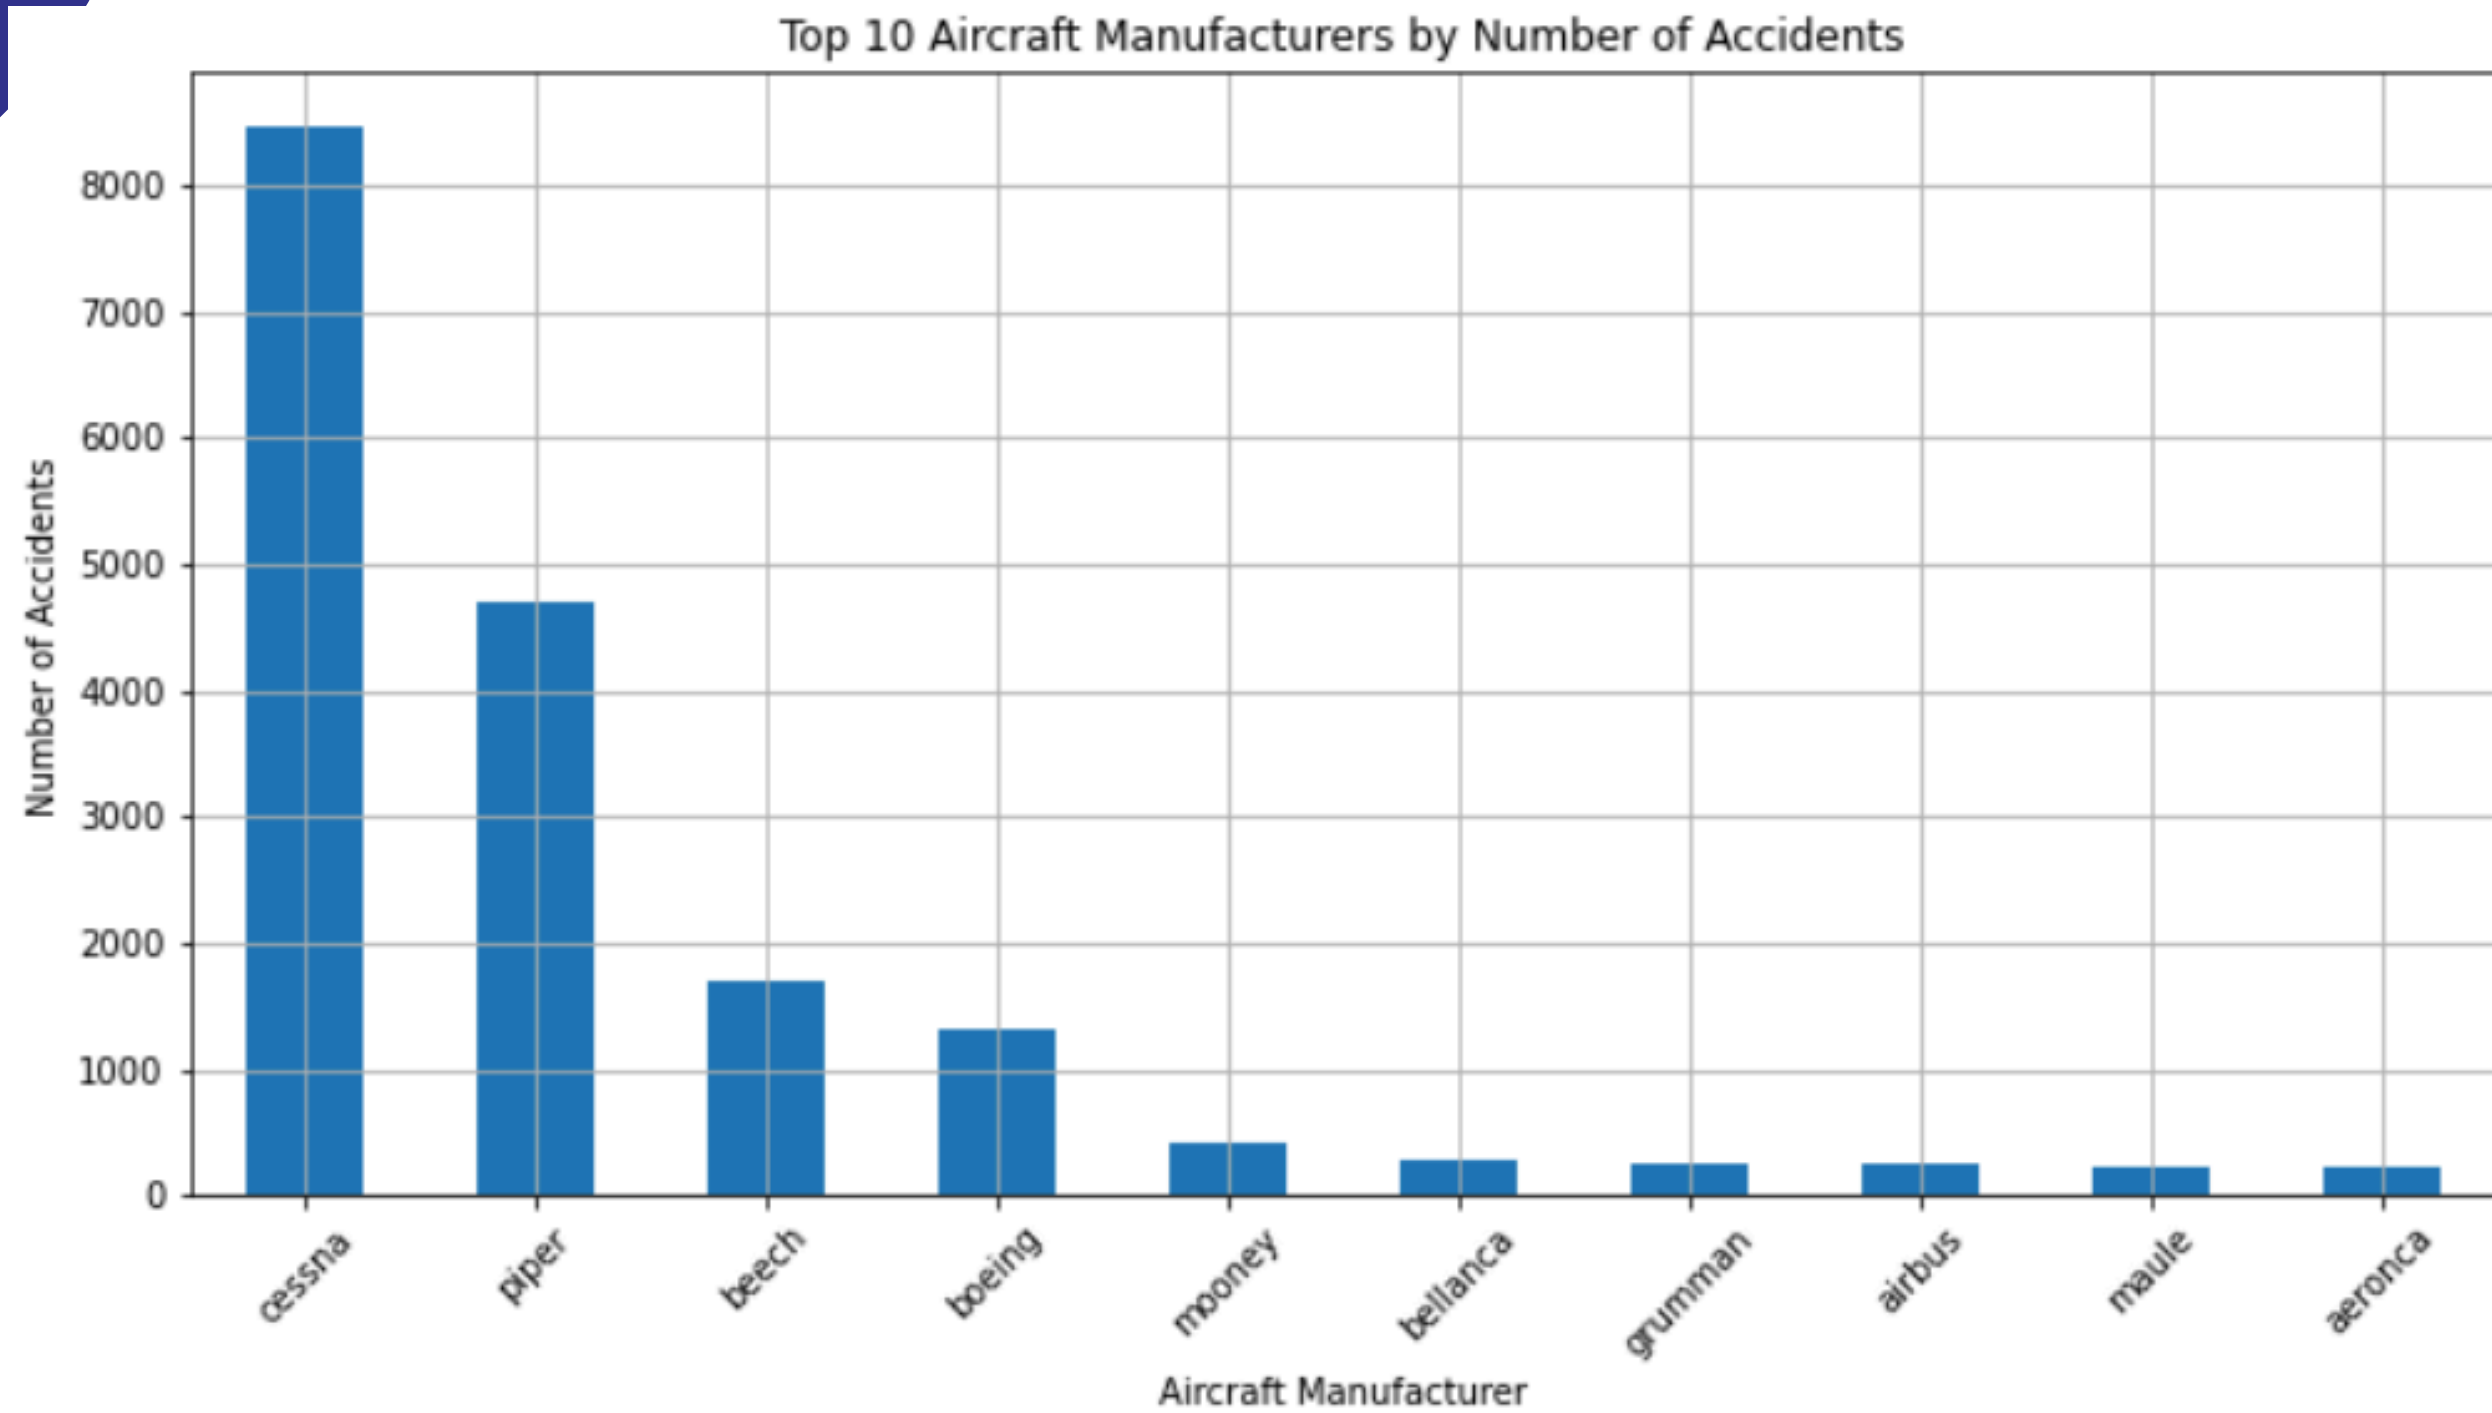

ACCIDENT TRENDS OVER THE YEARS

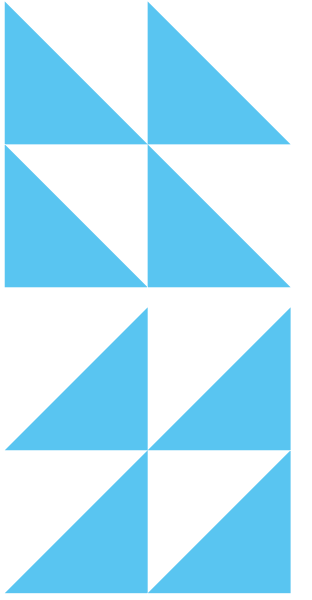

TOTAL INJURIES BY AIRCRAFT MAKE

RECOMMENDATIONS

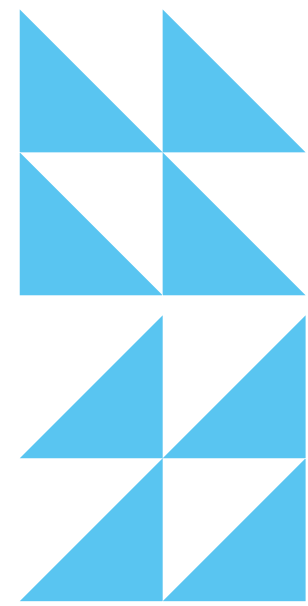

- Prioritize Manufacturers with Lower Accident Rates: Focus on reputable manufacturers like Boeing and Airbus to enhance safety while maintaining profitability.

RECOMMENDATIONS

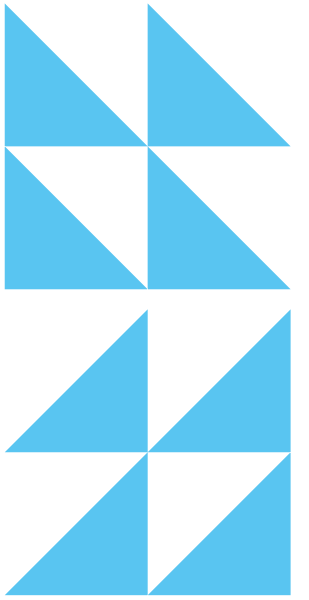

- Invest in Training and Technology: Provide ongoing advanced training for pilots and crew, utilizing state-of-the-art simulation to reduce human error.

RECOMMENDATIONS

- Conduct Regular Safety Audits: Implement routine safety assessments for all aircraft to identify potential issues and ensure adherence to safety standards.

RECOMMENDATIONS

- Engage with Manufacturers on Safety Innovations: Collaborate with manufacturers to adopt the latest safety technologies and improvements, enhancing operational efficiency.

Q & A

THANK YOU.
